NDI Launches the AUTOsense Touch Trigger Module

WATERLOO, CANADA – September 1st, 2008: NDI is pleased to announce the launch of a true innovation for handheld metrology – the AUTOsense Touch Trigger Module. Developed for NDI by Renishaw, the AUTOsense module offers hard probe, scanning and touch trigger capability.

This leading-edge technology automatically takes measurements when the probe stylus contacts the part, with no need for a button press. As a touch trigger probe, AUTOsense reduces unnecessary tip deflection errors by automatically taking measurements when the probe stylus contacts the part. During contact surface scanning AUTOsense does not continue measuring when the stylus leaves the work piece, eliminating invalid points.

“AUTOsense is another example of how NDI continues to make probing with OPTOTRAK PROseries faster, easier, and more accurate,” said Paul Clausen, V.P. of Strategic Business Development at NDI. “NDI offers contact probing solutions that have no off-angle restrictions, beam breaks, or mechanical linkages and, with the addition of AUTOsense, OPTOTRAK PROseries is by far most impressive combination of versatility, performance, and usability.”

AUTOsense incorporates a quick-release changing system that eliminates the need for tools and stylus recalibration. The result is greater convenience, higher measurement throughput, and a degree of measurement accuracy far superior to standard methods.

About NDI

For over a quarter century, companies have trusted NDI as the pioneer in advanced optical metrology. With offices, dealers, and thousands of measurement systems deployed worldwide, the NDI name is synonymous with providing the right solution for the right job. NDI’s new generation of portable metrology solutions has set a new benchmark for system accuracy, usability, and flexibility. If the need arises, our highly regarded customer support services will keep you up and running. As the world leader in innovative measurement technology, NDI has the knowledge and experience to provide the focused solutions and services you need.
