**NDI Launches OPTOTRAK PROseries DMM Software Version 2.0**

**WATERLOO, CANADA – September 2<sup>nd</sup>, 2008:** NDI has released a more powerful version of its innovative Dynamic Measuring Machine (DMM) software for OPTOTRAK PROseries. This easy-to-use application captures, records, and rapidly displays how 3D and 6DOF measurements change over time. Version 2.0 introduces a simplified user interface and greatly enhances the ability to perform complex alignment procedures.

Move beyond the limitations of conventional displacement sensors, strain gages and accelerometers. With just a few mouse clicks, users can perform dynamic motion measurement functions anywhere on the shop floor. Real-time visual feedback, simple setup, and the ability to export data make this an ideal tool for dynamic tracking applications such as structural analysis and door closure testing. There are no complicated learning curves, so new users can collect and analyze motion data almost immediately.

“This latest version really highlights the advantage of NDI’s high-speed optical design over other technologies,” said Paul Clausen, V.P. of Strategic Business Development at NDI. “As part of a comprehensive solution that includes inspection and reverse engineering, this software greatly simplifies the analysis of complex motion on the shop floor and opens the door to more advanced applications.”

With OPTOTRAK PROseries DMM, you can measure vibrations, traveled paths, velocities, accelerations, displacements, positions, orientations, deformations, and angles. Applications include part positioning and alignment, door and closure testing, structural testing and analysis, vibration analysis, part deformation and dynamics analysis, and wind tunnel testing.

**About NDI**

For over a quarter century, companies have trusted NDI as the pioneer in advanced optical metrology. With offices, dealers, and thousands of measurement systems deployed worldwide, the NDI name is synonymous with providing the right solution for the right job. NDI’s new generation of portable metrology solutions has set a new benchmark for system accuracy, usability, and flexibility. If the need arises, our highly regarded customer support services will keep you up and running. As the world leader in innovative measurement technology, NDI has the knowledge and experience to provide the focused solutions and services you need.
