NDI Launches the Large-Volume Model XR Optical Tracker

WATERLOO, CANADA – September 5th, 2008: NDI has unveiled a versatile and cost-effective innovation for large-volume metrology – the Model XR Optical Tracker. Now you can perform true handheld laser scanning and probing to a range of 12m, as well as dynamic tracking. Model XR gives you all the functionality of a laser tracker with the added benefit of instant tracking to eliminate beam breaks.

In addition, the Optical Tracker's high-speed, real-time digital photogrammetry provides unique functions and benefits. The ability to instantaneously track multiple objects with one system enables applications such as the real-time guided assembly of large parts.

Dynamic Part Referencing allows you to automatically compensate for vibrations and movement during measurement. This feature also allows you to continuously expand the tracker's measurement volume for even greater coverage.

“Model XR introduces the superior usability of OPTOTRAK PROseries to large-volume metrology,” said Paul Clausen, V.P. of Strategic Business Development at NDI. “NDI continues to expand the capability and versatility of its portable inspection and reverse engineering systems, bringing more markets and applications into the all-in-one solution.”

Model XR is a comprehensive, versatile, and cost-effective measurement solution that delivers superior ease of use for large-volume applications.

About NDI

For over a quarter century, companies have trusted NDI as the pioneer in advanced optical metrology. With offices, dealers, and thousands of measurement systems deployed worldwide, the NDI name is synonymous with providing the right solution for the right job. NDI's new generation of portable metrology solutions has set a new benchmark for system accuracy, usability, and flexibility. If the need arises, our highly regarded customer support services will keep you up and running. As the world leader in innovative measurement technology, NDI has the knowledge and experience to provide the focused solutions and services you need.
