NDI Launches the OPTOTRAK ScanTRAK Bundled Laser Scanning Solution

WATERLOO, CANADA – September 20th, 2007: NDI has announced the launch of the OPTOTRAK ScanTRAK™ Advanced Handheld Laser Scanning System, a bundled solution and shop-floor innovation that combines the power of optical measurement with large volume, point-cloud laser scanning. ScanTRAK includes NDI's Optical Tracker, an integrated Multi-Sided Probe (MSP), a Perceptron V5 laser scanner, plus an available laptop computer and PolyWorks™ advanced point-cloud analysis software.

The ScanTRAK system is a complete inspection and reverse engineering solution that addresses a full range of shop-floor applications, including quality assurance, tooling and assembly verification. Ideal for scanning large parts, ScanTRAK's ability to seamlessly switch faces allows operators to approach, scan, and probe from almost any angle, dramatically improving usability and measurement throughput.

NDI's advanced optical technology offers the added advantage of dynamic referencing, a powerful feature that automatically compensates for part and tracker movement during scanning to guarantee higher shop-floor accuracy.

ScanTRAK is one of the lightest scanners on the market and measures at rates as high as 458,400 points per second with a 140 mm-wide laser stripe. In addition, the MSP provides support for both point-cloud and contact-probe measurement with virtually unlimited range of motion. The result is a shop-floor solution that finally brings flexibility and ease of use to walkabout scanning.

"NDI technology provides the best solution for the measurement of large parts while providing higher shop-floor accuracy through dynamic referencing," said Paul Clausen, V.P. of Strategic Business Development at NDI. "The Optical Tracker's advanced design offers superior ease of use and, with the addition of the Perceptron V5, ScanTRAK becomes an impressive combination of flexibility, performance, and usability."

NDI's advanced measurement systems supports a wide range of commercially available software applications for both scanning and touch probing.

About NDI

For a quarter century, companies have trusted NDI as the pioneer in advanced optical metrology. With offices, dealers, and thousands of measurement systems deployed worldwide, the NDI name is synonymous with providing the right solution for the right job. NDI's new generation of portable metrology solutions has set a new benchmark for system accuracy, usability, and flexibility. If the need arises, our highly regarded customer support services will keep you up and running. As the world leader in innovative measurement technology, NDI has the knowledge and experience to provide the focused solutions and services you need.
