**Steinbichler Integrates NDI's
OPTOTRAK PROseries for its Latest T-Scan Product**

Waterloo, ON, April 18, 2006 – Steinbichler has integrated NDI's OPTOTRAK PROseries advanced optical tracking system with their latest T-Scan product offering. NDI's next-generation Optical Tracker now complements a lighter, ergonomically improved T-SCAN laser scanner.

“This continues a great history of cooperation and innovation between NDI and Steinbichler,” commented Paul Clausen, V.P. of Strategic Business Development at NDI. “When you combine the separate improvements we've made to our respective technologies into one system, you have everything you need to achieve top results on the shop floor.”

Performance improvements to both the laser scanner and Optical Tracker provide much higher system accuracy for sophisticated applications. The Optical Tracker's significantly larger measurement volume and the ability to optimize and verify tracker accuracy on the shop floor provide reliable and functional operation.

About NDI

As the world leader in innovative spatial technology, NDI has a quarter century of knowledge and experience to provide the focused solutions and services you need. With offices, dealers, and thousands of measurement systems deployed worldwide, the NDI name is synonymous with providing the right solution for the right job. NDI's latest generation of portable metrology solutions has set a new benchmark for shop-floor accuracy, usability, and flexibility.
