

UPDATE

WATERLOO, CANADA – May 7, 2007: The Perceptron ScanWorks® V5 laser scanner has been successfully integrated with the OPTOTRAK® PROseries Advanced Measurement System, a natural innovation made possible by the flexibility of NDI's Multi-Sided Probe (MSP).

The integration of Perceptron's premier laser scanner with NDI's MSP has produced a powerful hand-held tool for surface scanning that does not suffer from mechanical restrictions or beam break issues. By itself, the MSP provides unrestricted freedom of movement for contact probing. When attached to the V5, the MSP allows operators to approach and scan parts from almost any angle.

"The successful integration of Perceptron's V5 with NDI's MSP is a great example of how NDI is bringing true innovation to the industrial shop floor," said Paul Clausen, V.P. of Strategic Business Development at NDI. "Once again we can see the enormous benefit of optical technology as it continues to simplify shop-floor metrology while expanding measurement capabilities at the same time."

Operators can now quickly attach the MSP to the V5 and begin scanning with no need for time-consuming calibration. The MSP can also be detached for touch probing applications. The end result, said Clausen, is a truly "all-in-one" portable metrology system that already sets a new benchmark for real-world performance and usability.

NDI expects significant interest as three-dimensional point-cloud data is increasingly being used worldwide for applications involving product development, quality improvement, reverse engineering and inspection.

About NDI

For a quarter century, companies have trusted NDI as the pioneer in advanced optical metrology. With offices, dealers, and thousands of measurement systems deployed worldwide, the NDI name is synonymous with providing the right solution for the right job. NDI's new generation of portable metrology solutions has set a new benchmark for system accuracy, usability, and flexibility. If the need arises, our highly regarded customer support services will keep you up and running. As the world leader in innovative measurement technology, NDI has the knowledge and experience to provide the focused solutions and services you need.
